

IMPORTANT NOTICE

NOTE

You have the New Eberspächer Ax2 air heater or HS3 water heater supplied with a new, quieter, Fuel Metering Pump (FMP).

There are three important changes to note during installation.

FUEL SYSTEM

1. This NEW FMP has the wiring connections on the opposite end to that previously, it is now on the same end as the fuel input (Filter / Suction). It must still be fitted in accordance to the instructions as stated in the Technical Manual on the accompanying CD, Section 3.16 Fuel Supply, on page 22 onwards.
2. Both the suction and pressure fuel pipes are now Blue pipe, size 2mm i.d. and 4mm o.d. butt joined with rubber hose and 9mm clips. This differs to previous FMPs.

ELECTRICAL SYSTEM

3. These heaters also have a dedicated CANBUS switch wiring loom which must **NOT** be modified in anyway without prior written instruction from EBUK.
